

## ABSTRACT OF THE DISCLOSURE

The present invention encompasses compounds of Formula I

5

I

or pharmaceutically acceptable salts thereof, wherein **A** is the base molecule of a propionic acid or acetic acid NSAID, or a derivative thereof, X is  $-\text{CO}_2\text{H}$ , *1H*-tetrazol-5-yl or *2H*-tetrazol-5-yl and  $\text{R}^1$  and  $\text{R}^2$  are each independently selected from the group consisting of:  $\text{C}_1$ - $\text{C}_6$ alkyl and  $\text{C}_3$ - $\text{C}_6$ cycloalkyl, as well as pharmaceutical compositions comprising the compounds and methods of using the compounds. The compounds of the present invention lower the level of  $\text{A}\beta_{42}$  and are therefore useful for preventing, delaying or reversing the progression of Alzheimer's Disease.
